

ONIX – User Stories

1. Title: In-Meeting Real-Time Transcription for Participants

Priority: High

User Story:

As a meeting participant,
I want the AI assistant to transcribe the meeting in real-time,
So that I can follow along clearly and have written records of the conversation.

Acceptance Criteria:

- Given that the user has installed the Chrome extension and joined a Google Meet,
When the meeting starts,
Then the extension will begin capturing audio and display real-time transcription on the dashboard.
- Given that multiple participants are speaking,
When the system identifies different voices,
Then each speaker's text will be tagged with their name (if available).

2. Bot Join by Host Control

Priority: High

User Story:

As a meeting host,

I want to invite the AI bot to join the meeting,

So it can transcribe and manage tasks for the whole meeting seamlessly.

Acceptance Criteria:

- Only the meeting host can invite or add the AI bot into the Google Meet.
- Once invited, the bot joins the meeting as a participant, captures audio, transcribes in real-time, and displays transcripts.
- The bot can handle multiple speakers and tag their speech correctly.

3. Meeting Summarization & Action Items

Priority: High

User Story:

As a user,

I want the assistant to auto-generate a summary after the meeting,

So I can review key decisions, action items, and points discussed in my preferred language.

Acceptance Criteria:

- Given the meeting has ended,
When the transcription is processed,
Then the system generates a summary with sections for key decisions and action items.
- Given users access the dashboard,
When they select a meeting,
Then they can view or download the summary as text or PDF.
- Given the summary needs editing,
When the user clicks “Edit Summary,”
Then they can make manual changes and save a custom version.

- Given the user chooses a preferred language,
When downloading or viewing the summary,
Then the system provides it in that language.

4. Detailed Notes Option

Priority: High

User Story:

As a user (e.g., a student),

I want to choose detailed notes instead of a summary after the meeting,

So I get a more comprehensive and organized record to study from in my preferred language.

Acceptance Criteria:

- After the meeting ends and transcription is processed,
The system generates detailed notes when the user selects that option.
- When users access the dashboard and select a meeting,
They can view or download the detailed notes as text or PDF.
- If users want to edit the detailed notes,
They can click “Edit Notes,” make changes, and save a custom version.
- Given the user chooses a preferred language,
When downloading or viewing the notes,
Then the system provides them in that language.

5. Title: Speaker Attribution with Visual Stats

Priority: Medium

User Story:

As a user,

I want the assistant to track who said what and how much each person contributed,
So that I can analyze engagement and ensure everyone is heard.

Acceptance Criteria:

- Given that a meeting has multiple participants,
When the transcription is reviewed,
Then each line is tagged with the corresponding speaker.
- Given that the meeting ends,
When the system processes contributions,
Then a chart will show percentage contribution per speaker.

6. Title: Follow-up Generator (Email, Tasks)

Priority: Medium

User Story:

As a user,

I want the AI assistant to auto-generate follow-ups from meeting notes,
So that I can send emails or assign tasks without extra typing.

Acceptance Criteria:

- Given that a meeting summary includes action items,
When the user clicks “Generate Follow-up”,
Then the system suggests emails or task assignments for each item.
- Given that the user wants to edit the email,
When the draft is shown,
Then the user can customize the message before sending.

OUR SERVICES

Meeting Assistant

Smart Scheduler

Conversation Intelligence

Task & Action Alerts

Onix makes scheduling and lead management effortless.

Service include:

-  Intelligent Time Slot Suggestions
-  Automatic Calendar Integration
-  Lead Routing to Right Team Member
-  Reminder Notifications

8. Title: Calendar Integration

Priority: High

User Story:

As a user,

I want the AI to integrate with my calendar,

So that it can auto-join relevant meetings or suggest which meetings to record.

Acceptance Criteria:

- Given calendar access,
When a meeting is scheduled,
Then the system checks if it should attend (based on title, participants, or user rules).
- Given user approval,
When a meeting is about to start,
Then the bot requests permission to join.
- Given multiple meetings in a day,
When overlap is detected,
Then the system prioritizes based on meeting importance or previous activity.

Meeting Assistant

Smart Scheduler

Conversation Intelligence

Task & Action Alerts

Onix keeps you ahead of your responsibilities.

Service include:

- ⚙ Automatic Task Detection
- 🔄 Task Assignment Tracking
- 📧 Email Alerts & Reminders
- 📅 Deadline Management

9. Title: Chatbot for Live Meeting Questions

Priority: Medium

User Story:

As a user,
I want to ask questions during the meeting,
So that I can quickly find what was said without scrolling.

Acceptance Criteria:

- Given that the meeting is active,
When I ask “What did Bob say about budget?”,
Then the bot replies with that part of the transcript.
- Given that I ask about tasks or decisions,
Then the bot lists them directly.

**10. Post-Meeting Question Bot**

Priority: Medium

User Story:

As a user,
I want to ask questions about the meeting after it has ended,

So I can easily find specific details or summaries without reading the full transcript.

Acceptance Criteria:

- Given the meeting transcript is saved and accessible,
When I ask, “What were the subtopics discussed in the meeting?”,
The bot replies with that exact part from the transcript or a summary of it.
- When I ask about tasks or decisions,
the bot lists them directly from the saved transcript.
